50% Productivity Improvement

Paper forms are still the backbone of information gathering and process input. Scanning forms for archiving or image workflow is a widely accepted way of reducing storage space, improving access and speeding up processes. However, many organizations are slow to take the next step, which is to replace manual data-keying with recognition software, and automatically transfer data into the routing or indexing engine, or better still, into the process itself.

Download AIIM Forms Processing White Paper and learn:

- the different levels of forms-processing in use
- the benefits of automated character recognition
- the adoption of the latest technologies, particularly ICR (Intelligent Character Recognition)
- how ICR is applied to hand-writing and how it compares with traditional OCR (Optical Character Recognition)
