

# Parascript® FormXtra Module for Kofax Capture

*You Transform Businesses  
Parascript Delivers the Data*

## Kofax Capture and Parascript AI Software

Parascript's FormXtra Module for Kofax Capture provides the most comprehensive data location and extraction capabilities available. Kofax Capture users can now process a wide range of applications, from unconstrained and unstructured handwriting recognition to automatic signature location and verification.

**Maximize Your Kofax Investment.** Use your existing document capture workflows and take full advantage of your Kofax Capture document classification, image quality control, and validation. Parascript FormXtra Module for Kofax allows you to maintain your environment while plugging in additional functionality. With the addition of FormXtra, you easily expand your document capture to include handwritten forms, check processing or signature verification.

**Simple to Set-up.** Set-up is easy since the system uses Kofax's existing batch workflow management—simply add the fields you want to the document class and Kofax with Parascript FormXtra does the rest.

**Full Spectrum Data Support.** FormXtra Module for Kofax Capture supports the full range of document information including machine print (even hard-to-read fonts such as dot matrix), constrained handprint common in structured forms, and unconstrained handwriting common in unstructured forms. The module also includes options for signature verification and check processing.

**Configured to Your Exact Requirements.** FormXtra Module for Kofax Capture comes with a GUI tool that enables you to have control over configurations. Quickly create field types and business rules that are used by Kofax during document processing. With FormExtra Module for Kofax Capture, you easily customize the data location and extraction capabilities meet your business needs.

**Business Applications Now within Reach.** Business applications examples include the following:

- Process mixed forms that are commonly filled out by hand, such as job applications, patient applications, health updates and staffing records such as hours worked.
- Automatically locate the address information on purchase orders, invoices and remittance to perform lookups that support reconciliation.
- Automatically locate signatures to verify that forms are completed—even sort documents based upon matching signatures held within a master file.
- Perform automated check data location and extraction to support remittance data validation or update account records.
