

Parascript Document Processing Automation

AT THE CORE OF COGNITIVE RPA

Put Parascript document automation at the core of your cognitive Robotic Process Automation (RPA) to enable straight through processing of your complex document-oriented processes.

Parascript self-learning software processes high volumes of documents faster, using fewer people with less errors. Enable your RPA workflows to access key data in all of your documents.

Achieve Real Document Automation

Ensure your RPA platform has the most accurate, quality data at its core with Parascript self-learning document classification, data location, extraction and verification software.

Straight Through Processing

Large amounts of data flow straight through the system with zero manual intervention.

Parascript automated field-level tuning identifies answers that are accurate (which flow through) via machine learning-based recognition that is more accurate than humans can achieve.

With machine learning, the system continues to learn from mistakes and improve results further reducing the need for manual intervention.

Automatic Mapping, Classification & Extraction

Our software, given any form, can automatically classify and analyze the document and create a “map” with pre-built field zones, labels and data types. Ready for Parascript automated data extraction and verification.

Parascript self-learning technology can take your data and samples and automatically configure extraction for semi-structured and unstructured documents.

Highest Accuracy Core for Your RPA

Parascript software interprets documents from any source such as scanners, copiers, mobile devices and more.

Our high quality data results are passed to your established RPA processes and workflows.

With Parascript, you will have data delivered more rapidly at less cost with accuracy that you can rely on for all your downstream RPA activities.

Immediately Up-and-Running Easy RPA Integration

Parascript software offers the ability to get up-and-running immediately out-of-the-box and is also highly flexible for tailored customization that you may need.

Parascript provides complete ease of integration from department-specific implementations to high-volume enterprise-wide rollouts.

Our software supports your RPA platform across your enterprise.
