

ParaScript Recognition Suite[®]

Comprehensive Technology Suite for Financial Services

Banks, credit unions, and financial institutions operate in a high-stakes environment where accuracy, speed, and security define operational success. Every day, they process thousands — sometimes millions — of documents and transactions.

Manual review is costly, error-prone, and unsustainable as fraud tactics evolve to exploit vulnerabilities in check processing, payments, and document verification. Financial institutions must also manage a wide variety of document streams—checks, deposits, loan applications, invoices, and compliance forms—each requiring specialized recognition. Relying on fragmented solutions increases complexity, slows operations, and heightens risk, making a unified, AI-powered approach essential for accuracy, efficiency, and effective fraud prevention.

Institutions are under constant pressure to improve processing speed, reduce operational costs, enhance customer experience, and stay ahead of increasingly sophisticated fraud schemes — all while ensuring compliance with industry regulations and security standards.

Tailored Packages with Flexible Licensing

ParaScript Recognition Suite Packages

The ParaScript Recognition Suite (PRS) unifies all ParaScript Financial Services and Fraud Prevention software into a single, comprehensive offering. End Users and Partners sign up for PRS license programs for targeted applications. Partners gain access to all ParaScript financial and fraud prevention software.

PRS Deposits: Software prepared for check item processing at the point of capture, back-office solutions, and clearing/exchange between financial institutions.

PRS Fraud Prevention: A collection of software prepared for payment document processing, compliance review, and fraud prevention by detecting altered or counterfeit items.

PRS Documents: Comprehensive document automation for structured, semi-structured, and unstructured documents to automate the full lifecycle of document processing.

PRS Custom: For unique workflows and specialized applications, PRS can be tailored with any combination of capabilities across the suite to meet operational and compliance requirements.

The ParaScript Recognition Suite delivers the most comprehensive, flexible, and accurate solution for check processing, fraud prevention, and document automation—simplifying operations while driving accuracy, security, and efficiency.
