

## Le Mans Tech Scaled Its Banking Solutions with ParaScript's flexible SDKs.

For over a decade, Le Mans Tech has been a leading provider of Enterprise Content Management (ECM) and workflow automation for the community and mid-tier banking sector. To maintain its reputation for excellence, Le Mans Tech integrated ParaScript's proven recognition technology for their fraud prevention and document processing platform.

This partnership allows Le Mans Tech to deliver megabank security capabilities to community institutions with the agility and personal touch of a specialized integrator.

### The Challenge: The Legacy Gap in a Sophisticated Fraud Era

As a service-first organization, one of Le Mans Tech's challenges is staying ahead of the evolving nature of financial crime. Traditional Optical Character Recognition (OCR) engines, which have been the industry standard for decades, were hitting a ceiling. They struggled with complex cursive handwriting, unstructured data and the subtle forensic indicators of modern check fraud, such as mail theft and altered payees.

But for Le Mans Tech, the challenge went beyond just technology. They needed to find a partner that valued their business. Before fully committing to the ParaScript stack, Le Mans Tech encountered a common industry hurdle: Their previous recognition technology provider changed its structure and was no longer offering the same level of support. Le Mans Tech rigorously tested ParaScript's software, proving its higher accuracy and better support for Le Mans Tech and their clients.

*"We knew ParaScript had really good recognition solutions from previous client engagements. I knew Ati [Azemoun] at ParaScript from previous engagements, and because of our relationship and the quality of their tech, we didn't even waste time looking elsewhere."*

*- Tom Boser, President of Le Mans Tech*

### The Solution: Collaborative Engineering at Start-up Speed

Le Mans Tech chose to power its platform with the ParaScript Recognition Suite of products (PRS). Specialized SDKs, including CheckStock.AI, SignatureXpert.AI and CheckwashAlert.AI, were soon deployed in Le Mans Tech products for check fraud prevention. Boser said the quality of the solutions set ParaScript apart, but the collaborative spirit of the two teams is what took everything to the next level.

Rather than a one-size-fits-all vendor relationship, ParaScript provided Le Mans Tech with direct, responsive access to technical expertise. This also allowed Le Mans Tech to help test new functionality and integration principles of ParaScript's latest fraud-detection technologies. It's a symbiotic partnership that benefits both companies.

*“What’s great about working with ParaScript is that even though we may not be as big as some of their other partners, they still make time for us,” said Boser. “If we have a question, we can shoot them samples and have a response in 24 hours. They didn’t just tell us, ‘here is an API, go use it.’ They were willing to test with us, find scenarios and tune the engine to meet exactly what we needed.”*

This deep collaboration allows Le Mans Tech to move with incredible speed, and in one case, they went from initial prototype to a live, working solution for one of their clients in the banking space in just three months.

#### **The Results: A Competitive Edge and Scalable Certainty**

Not only does the ability to move from prototype to production so quickly give Le Mans Tech a massive competitive advantage over larger, slower integrators, leveraging ParaScript’s proprietary AI-driven solutions enables Le Mans Tech to prevent sophisticated fraud techniques that manual reviews often miss.

By leveraging the global leader in document AI, Le Mans Tech has solidified its position as a high-value strategic partner, and the partnership has also delivered measurable results for Le Mans Tech’s growth.

And because of the close, working partnership, Le Mans Tech is able to quickly adapt and fine-tune solutions for their clients. In the case of their bank clients, this means drastically reducing false positives and ensuring only high-probability threats are flagged for review.

“The flexibility and the ability for Le Mans Tech to react to the client and work with us has been fantastic,” added Ati Azemoun, VP of Business Development at ParaScript.

#### **The Proof Is in the Partnership**

The collaboration between Le Mans Tech and ParaScript proves that the strongest technology is only as good as the service that delivers it. And while ParaScript provides the sophisticated AI brain, Le Mans Tech provides the heart through dedicated implementation and local support.

“The fact that ParaScript is so willing to work with us the way they do is a testament to the kind of company they are. I can’t say enough good things about them,” said Boser.
